Linux script Tool

Use the Linux `script` command to save the output displayed by your work to a file named `typescript`. Students may be asked to create typescript files to demonstrate their work on programming projects for Weekly activities.

- Remote connect to your CS account
- Start a script to save your work on the next steps
  - `script`
  - `execute any commands that you wish to record in the typescript file`
  - `exit`
- Rename `typescript` to a more descriptive name for the given week and your project work.
  - `mv typescript w06_p3_typescript`
- Copy your newly named file to your activities handin directory or other assignment.
  - `FOR EXAMPLE ONLY: cp w06_p3_typescript /p/course/cs354-deppeler/handin/202301/activities/CSLOGIN`
    Don't forget to change the file name as directed in the assignment and the CSLOGIN to your cs login username
